

Artificial Intelligence (AI)

Artificial Intelligence allows machines to perform tasks that require human intelligence, such as learning, reasoning, and problem solving.

Machine Learning is a part of AI that enables computers to learn from data and make predictions.

Generative AI creates new content such as text, images, and code using AI models.

Embeddings convert text into numerical vectors that capture meaning.

ChromaDB is a vector database used to store embeddings and perform semantic search.

Retrieval Augmented Generation (RAG) combines document search with Large Language Models to generate accurate answers.
