

Artificial Intelligence

Artificial Intelligence (AI) is a field of computer science that focuses on creating systems capable of performing tasks that normally require human intelligence.

AI systems can perform tasks such as reasoning, learning, problem solving, speech recognition, image understanding, and decision making.

Machine learning is an important part of artificial intelligence. Instead of being explicitly programmed for every task, machine learning systems learn patterns from data.

AI is used in healthcare, finance, transportation, education, robotics, cybersecurity, and many other industries.
